PROFILE

Software developer based in Kraków with 5+ years of professional experience. I build, modernize and maintain back-end applications, with a strong focus on PHP, Laravel, system design, database work and long-term maintainability. I enjoy international team environments and actively explore networking, reverse engineering, electronics and AI tooling.

SKILLS

Backend	PHP, Laravel, PHPUnit, Pest, Filament, Golang, Goravel, Python 3, Flask, FastAPI
Databases	MySQL, PostgreSQL, Redis
Infrastructure	Docker, AWS, Linux, CI/CD
Frontend / Mobile	JavaScript, Vue, React, React Native
Tools	Git, Postman, Composer, npm, Claude Code, Cursor, LangChain

WORK EXPERIENCE

Zendesk

Backend Developer

July 2026 – Present

- Building and maintaining backend services for product-oriented application features.
- Improving service reliability, delivery workflows and day-to-day developer experience.
- Collaborating with international engineering teams on scalable backend systems.

NorthGravity

Backend Developer

July 2025 – July 2026

- Refactoring legacy codebases into cleaner, more maintainable backend modules.
- Maintaining production applications and improving CI/CD delivery pipelines.
- Supporting international team workflows through code reviews and technical documentation.

Fingoweb

Backend Developer

May 2022 – August 2025

- Modernizing legacy systems across multiple PHP frameworks and long-lived applications.
- Designing database models, backend architecture and API-oriented application modules.
- Translating business requirements into maintainable features for international clients.

WebFalcon

PHP Intern

May 2021

- Learning Laravel through practical backend tasks, code reviews and framework conventions.
- Building foundations in code quality, clean architecture and maintainability principles.

Freelancer

Web Developer, React Native Developer

December 2020 – Present

- Delivering end-to-end web and mobile application work for independent clients.
- Combining backend implementation with JavaScript and React Native interfaces.

EDUCATION

Bachelor of Engineering in Computer Science
Programming and Data Analysis, WSEI Kraków

2022 – 2026

Computer Science
Zespół Szkół Elektrycznych nr 1 w Krakowie

2018 – 2022

PROJECTS

BikeESP

Tech: ESP32-S3, C++, LVGL, GPS, embedded systems

ESP32-S3 cycling computer and telemetry device with AMOLED touch display, GPS tracking and real-time sensor data acquisition for performance analysis.

Cycling Calories ML

Tech: Python, FastAPI, scikit-learn, Strava API, regression models

Machine learning pipeline for predicting cycling calorie expenditure from Strava data, including feature engineering, regression model comparison and FastAPI route prediction.

NeuronAI – PHP Agentic Framework

Tech: PHP, Laravel, Symfony, AI agents, RAG, LLM integrations

Open-source contribution to a PHP framework for AI agents and RAG applications, including multi-provider AI integrations and Laravel / Symfony ecosystem support.

Poldek Driver

Tech: C++, TCP, Winsock2, networking, RCON

Multiplayer networking layer for PolMod, built around TCP / Winsock2 architecture with chat relay, direct messaging and RCON authentication.

Tor Kielce

Tech: Blender, 3D modelling, Assetto Corsa, real-time simulation

Co-author of an Assetto Corsa track mod recreating the Kielce racing circuit, covering 3D modelling, environment design and real-time simulation optimization.

TECHNICAL INTERESTS

AI agents, backend architecture, embedded systems, reverse engineering, networking, developer tooling and racing simulation technology.

LANGUAGES

Polish – native English – B2
